CREATORCONNECT · CODLY360 · MODULE C

Profile setup, social & *verification*

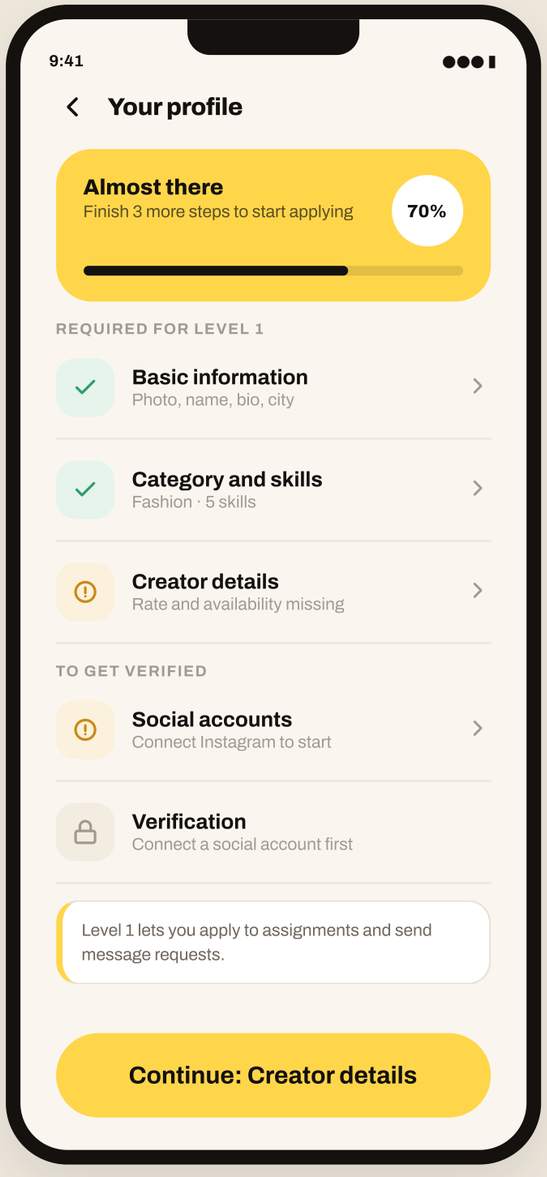

Detailed UI for screens C01 to C15 and their popups, in the approved theme: cream background, yellow pill buttons, bold Archivo headings with an italic serif accent, flat colour blocks, 28 px cards and 16 px inputs.

00 What this module does

Goal: take a new account from “signed up” to **Level 1** (profile complete, can apply and message) and then **Level 2** (verified). Only missing information is asked. Which sections appear depends on the role.

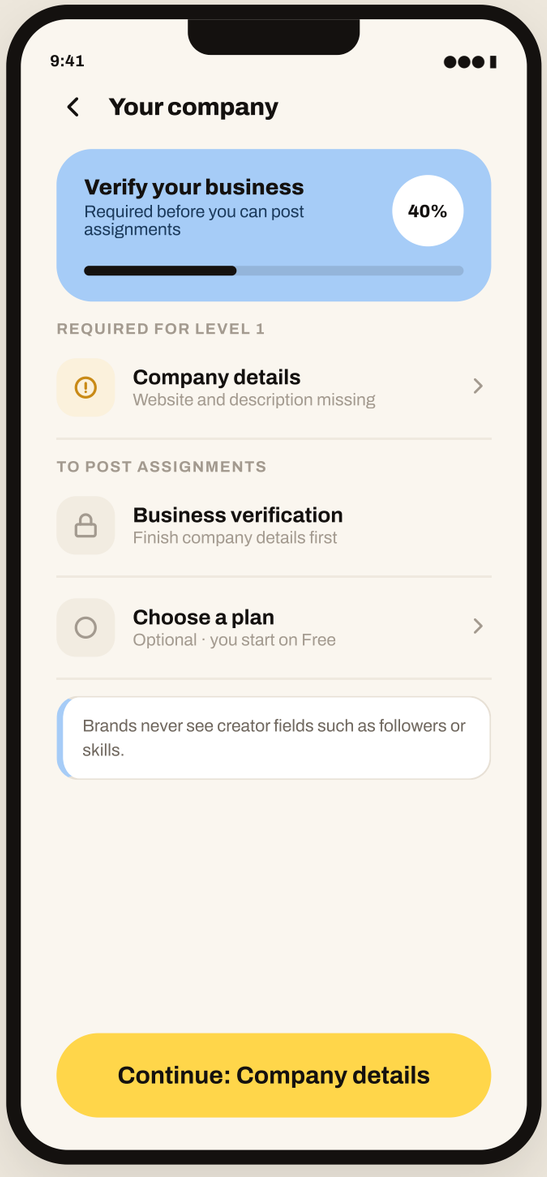

Not built here: Home (D), portfolio (F), discovery (E). Portfolio is only pointed to from the Professional form.

SECTION	CREATOR	PROFESSIONAL	PODCASTER	BRAND
Basic information (C02)	✓	✓	✓	Company details (C07)
Category and skills (C03)	✓	✓	✓ (category only)	—
Role details	C04 Creator details	C05 Professional details	C06 Podcast details	C07 Company details
Social accounts (C08–C11)	✓	✓	✓	—
Verification (C12–C14)	Social account check	Social or portfolio check	Social account check	Business check with documents
Add another role (C15)	✓	✓	✓	—

C01 **Profile completion — Creator**

Entry from Home. Shows what is done and what is missing for this role only. Required items count toward Level 1; social accounts and verification lead to Level 2. Locked rows explain what unlocks them.

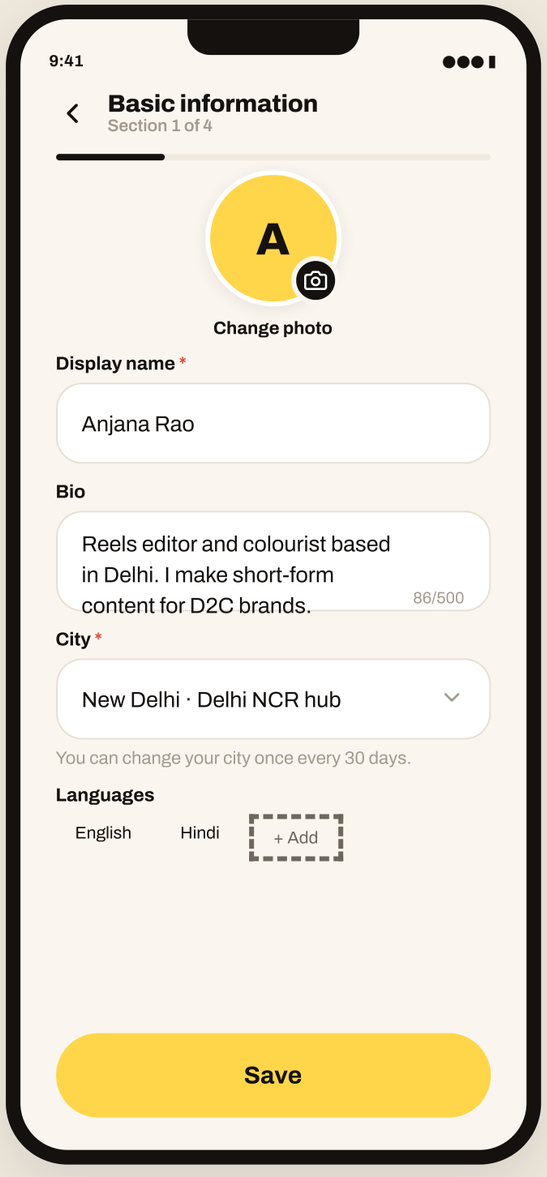

C01 **Profile completion — Brand**

Same screen, different sections. A Brand sees company and business verification instead of skills and social accounts. Plan choice is optional and links to the plans screen.

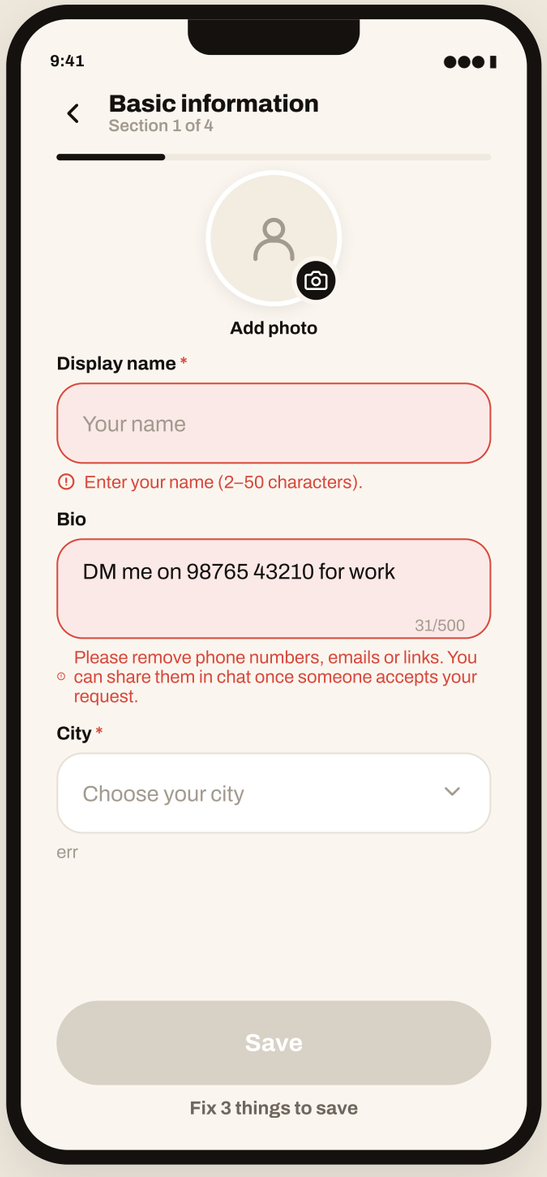

C01 **Profile completion — Loading**

Shape-matched skeletons while the profile and completion data load. If it fails, the standard error state with Retry appears; if offline, the cached checklist stays visible with an offline banner.

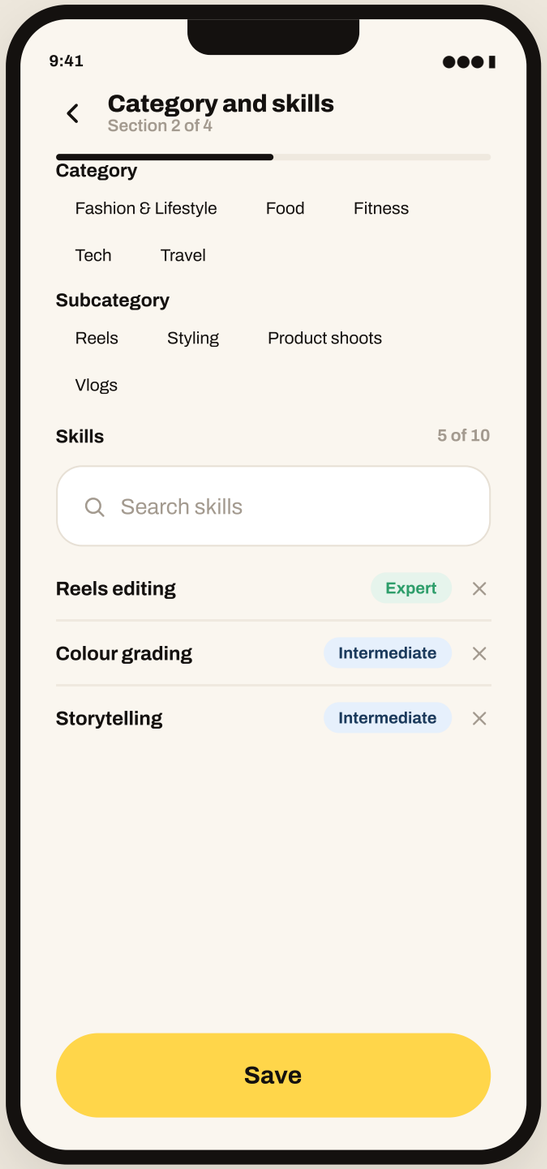

C02 **Basic information**

Photo, name, bio, city and languages. Anything already given at sign-up is pre-filled and not asked again. Photo uses the media pipeline; city comes from the fixed list.

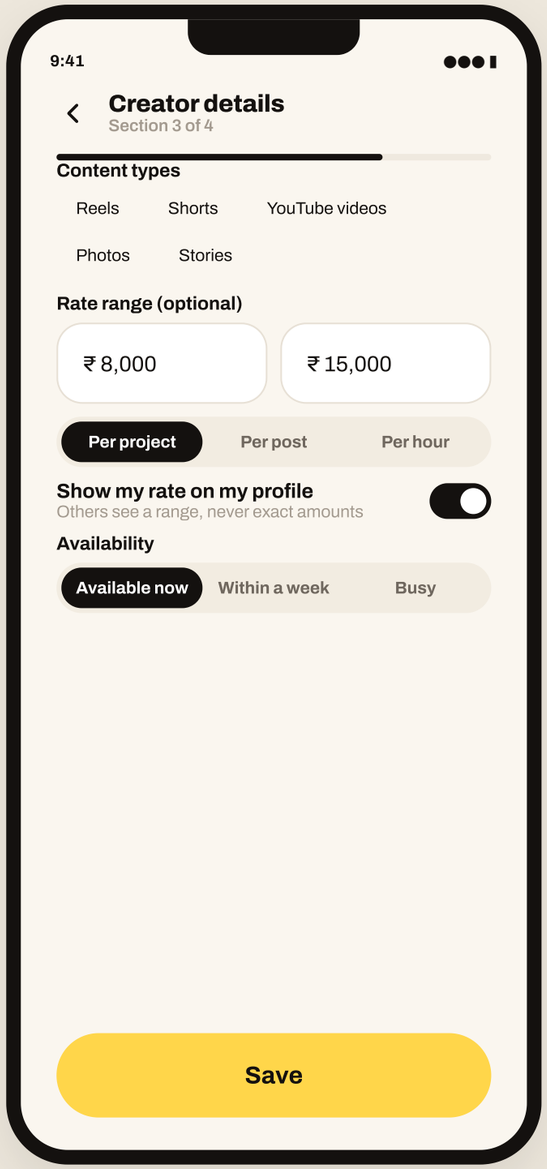

C02 **Basic information — errors**

Errors appear inline, right under the field, as soon as they can be known. The bio rule (no contact details) is explained kindly and tells the user where to share them instead. Save stays grey until fixed.

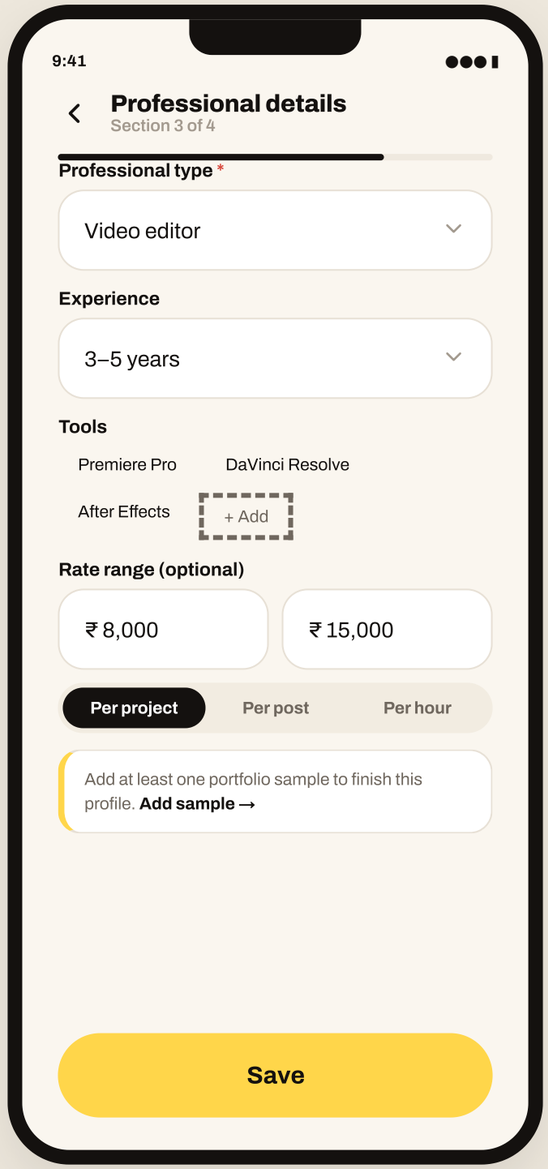

C03 Category and skills

Category and subcategory come from the server's tree; skills come from the skills list, each with a level. Limit of 10 skills is shown as a counter, not discovered by error.

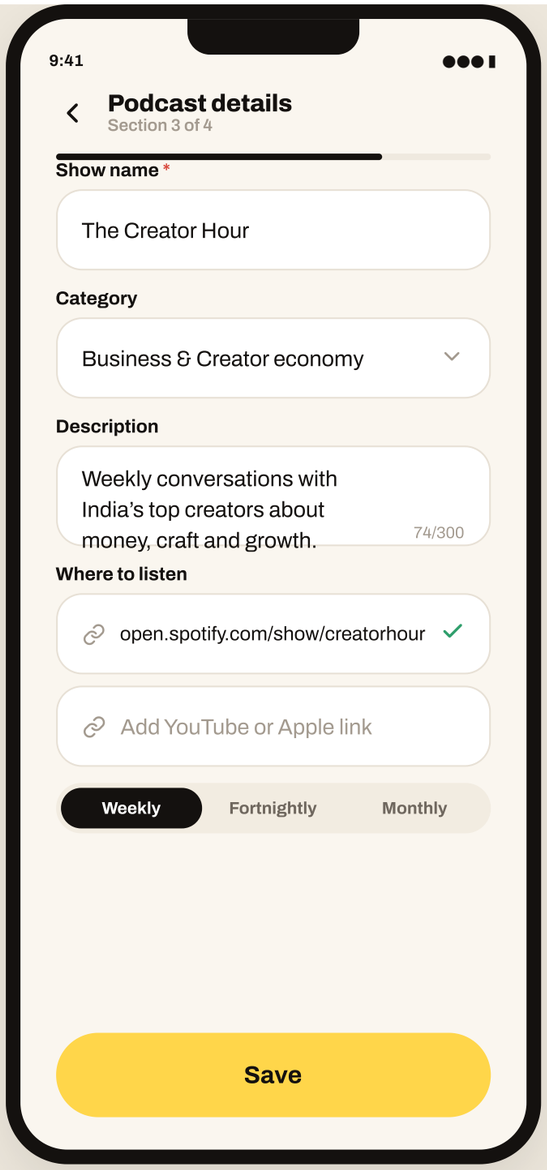

C04 Creator details

Creator-only fields. Rates are optional, in rupees, with a chosen unit. Minimum cannot be higher than maximum. Availability uses the backend's allowed values only.

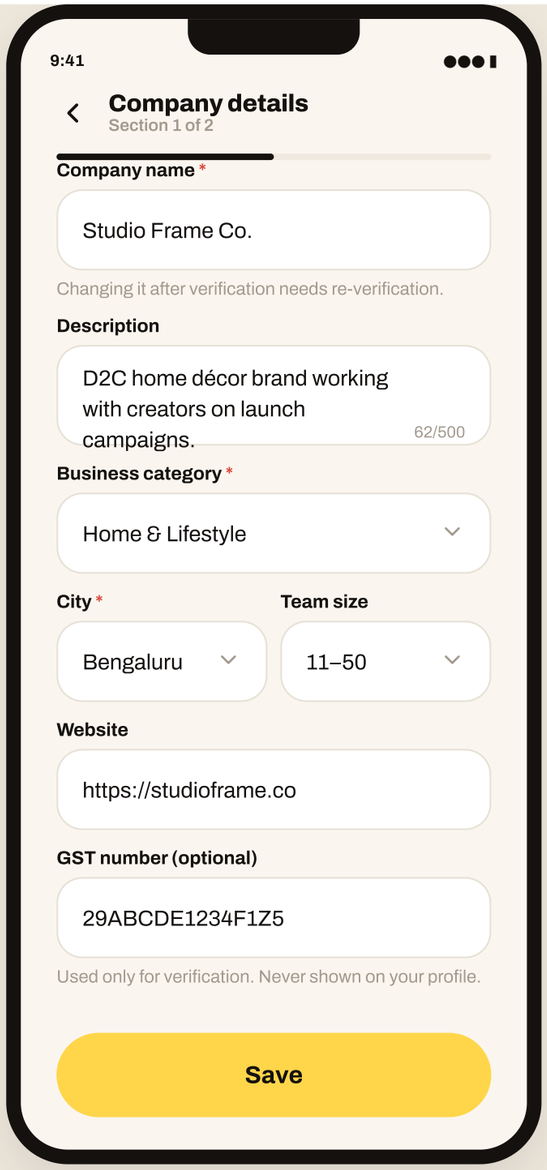

C05 Professional details

Professional type, experience, tools and rate. Portfolio is not built here: this screen only points to it, and the profile reaches Level 1 once one sample exists.

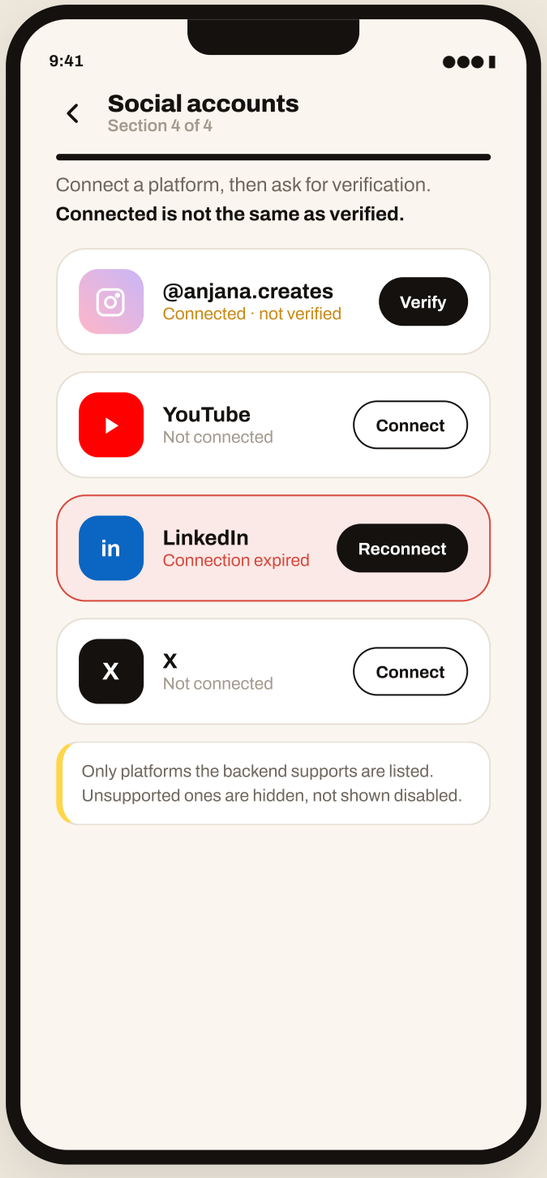

C06 **Podcast details**

Show information so guests and editors can find the podcaster. Links must be valid https addresses on supported platforms.

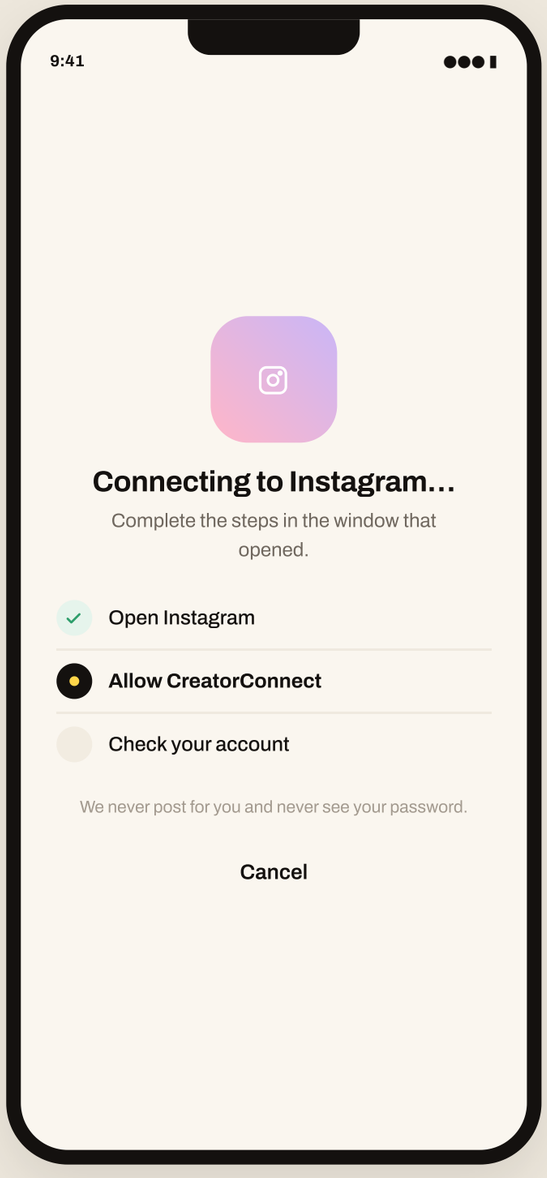

C07 **Company details**

Business details for creators and for verification. No creator fields. GST is optional here and private; it is requested again in the business verification screen if needed.

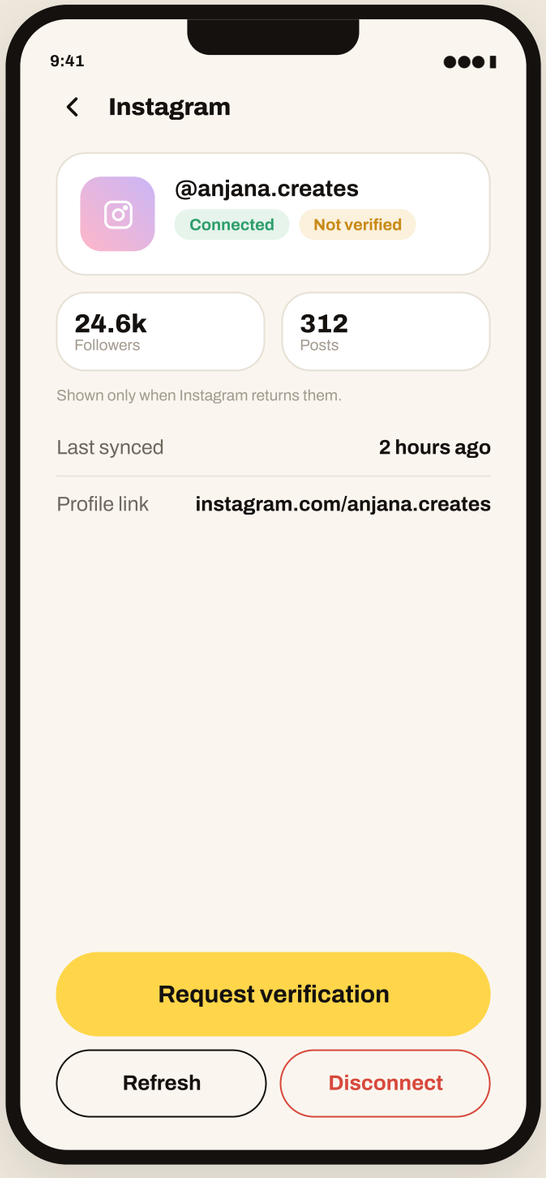

C08 **Social accounts**

Each platform has one of four states: not connected, connected, expired or failed, and verified. The list itself comes from the server, so adding a platform needs no app update.

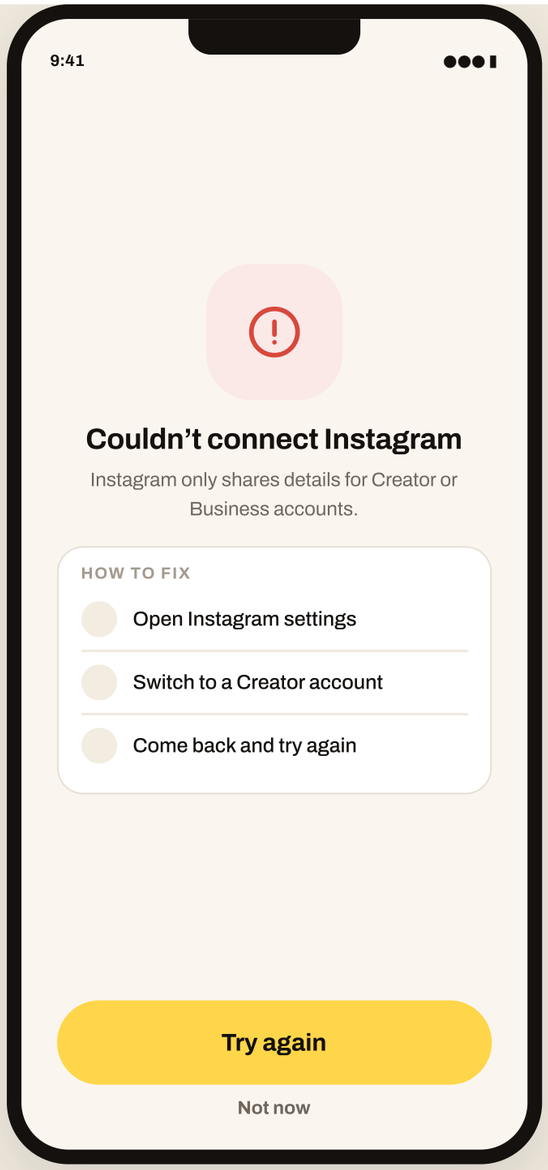

C09 **Connecting a social account**

Hand-off to the platform's own sign-in (or a code-in-bio check where there is none). Shows progress in plain steps and a privacy line. Cancelling returns to the list with nothing changed.

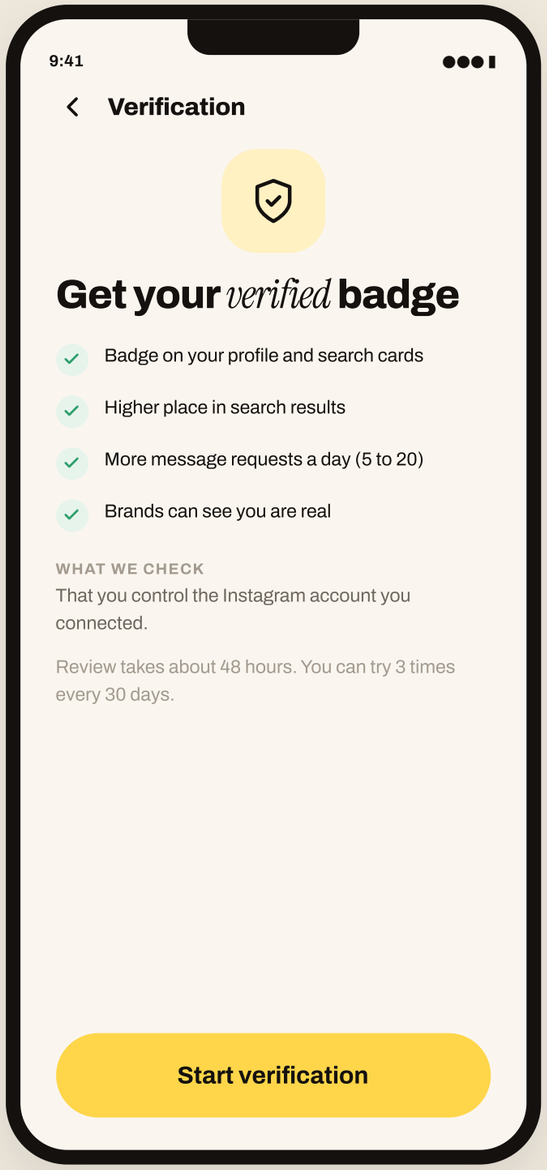

C10 **Social account detail**

Shows what the app knows about the linked account. Follower figures are optional blocks and disappear if the platform does not return them. Verification starts from here.

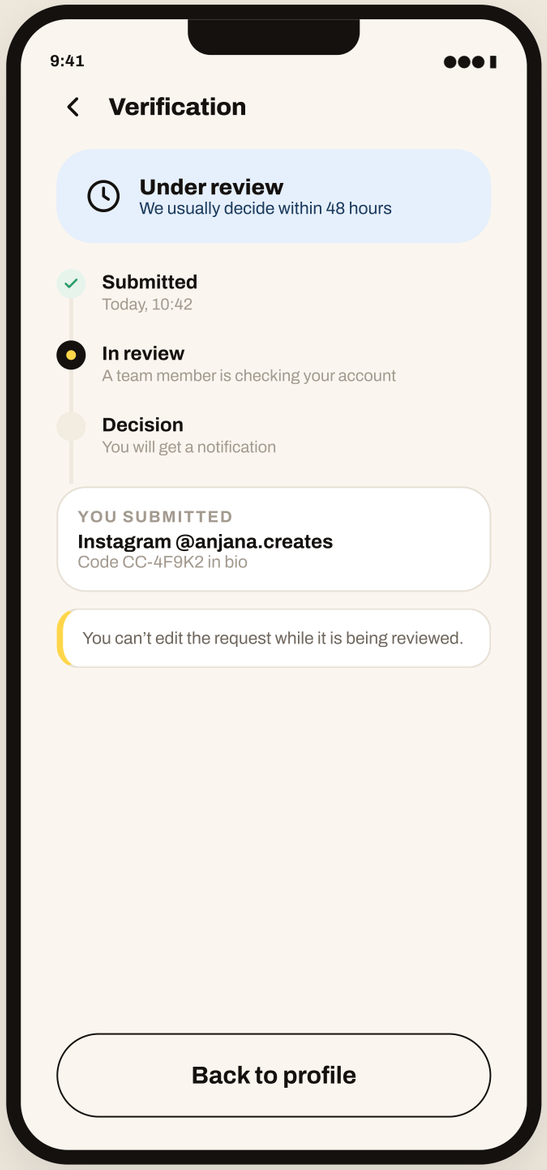

C11 **Connection error**

Plain-language reason and the next step. The same layout serves cancelled, expired, unsupported account, rate limit and network failure; only the text changes. No technical codes.

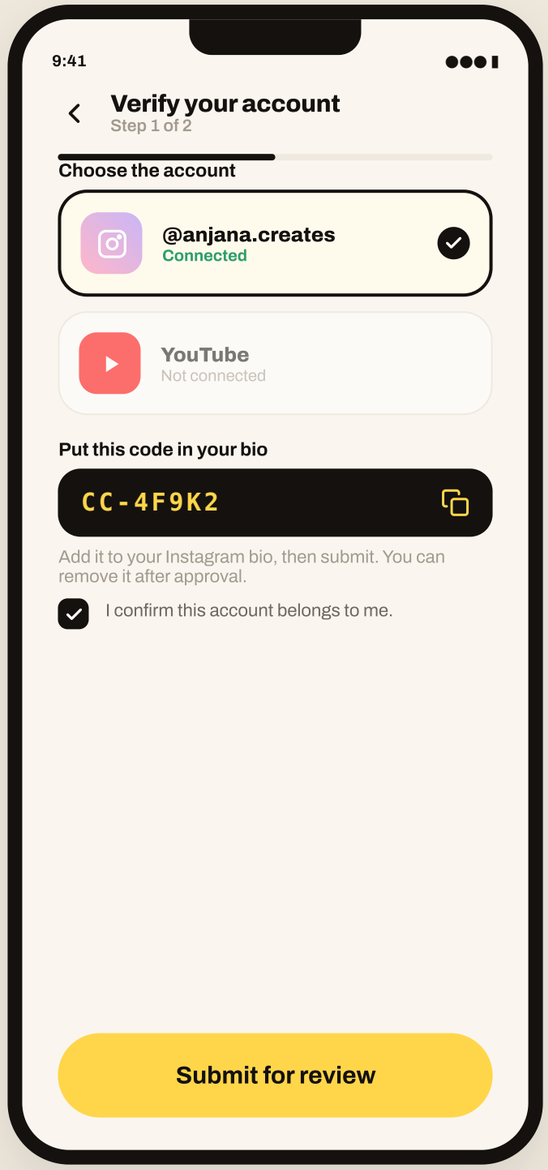

C12 Verification centre — not started

Explains the benefit and what is checked before asking for anything. The check depends on role: social account for creators, professionals and podcasters; business details for brands.

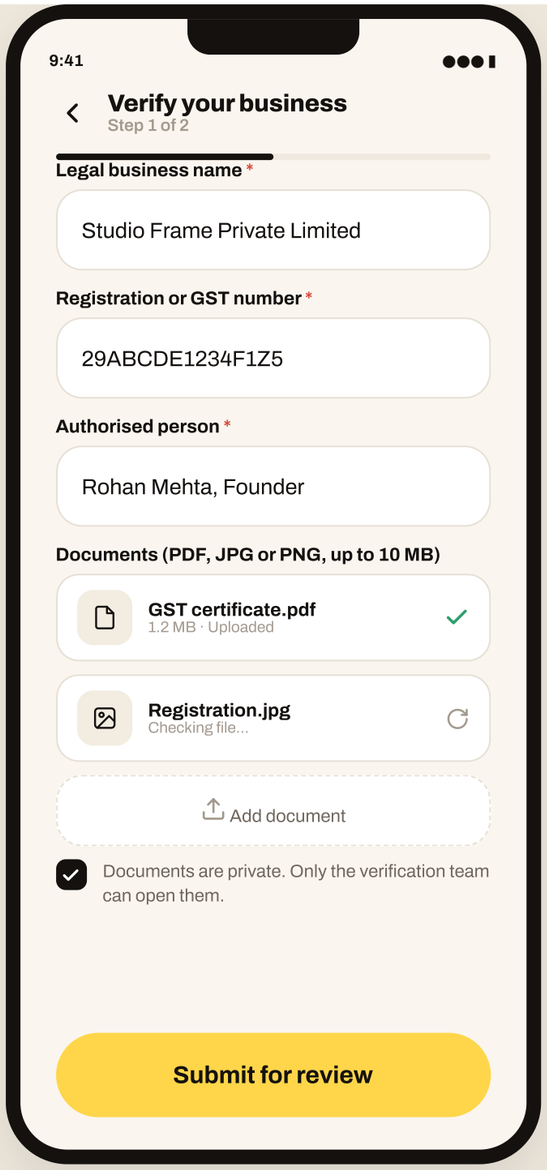

C12 Verification centre — under review

Status after submitting. A three-step timeline shows where the request is. The request is read-only until a decision arrives, so nothing changes under the reviewer.

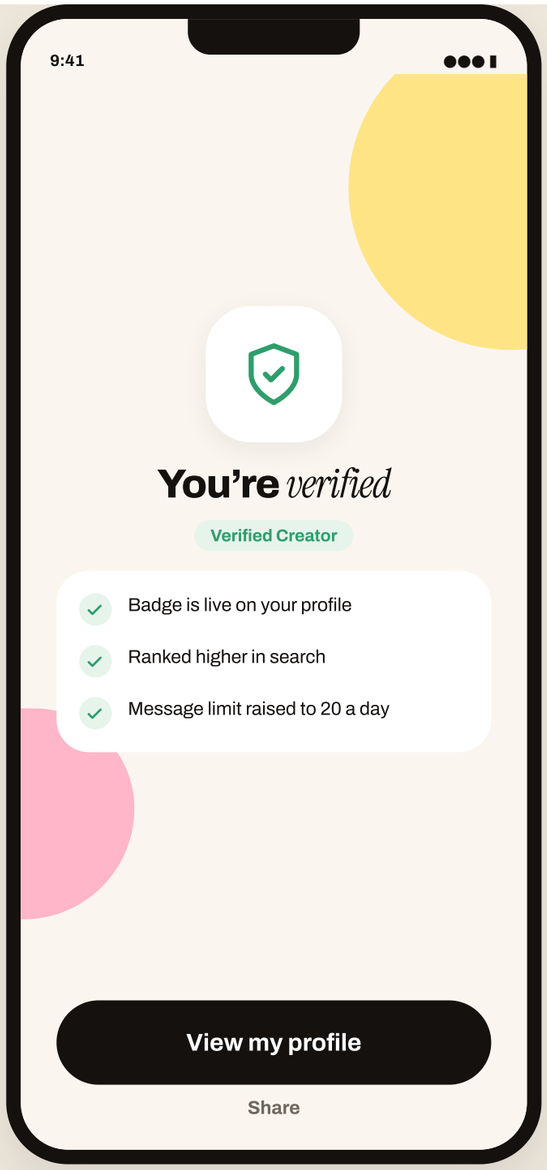

C13 Verification request — Creator

Creator, professional and podcaster request. Choose the connected account and prove control by placing a one-time code in the bio (used where the platform has no sign-in check).

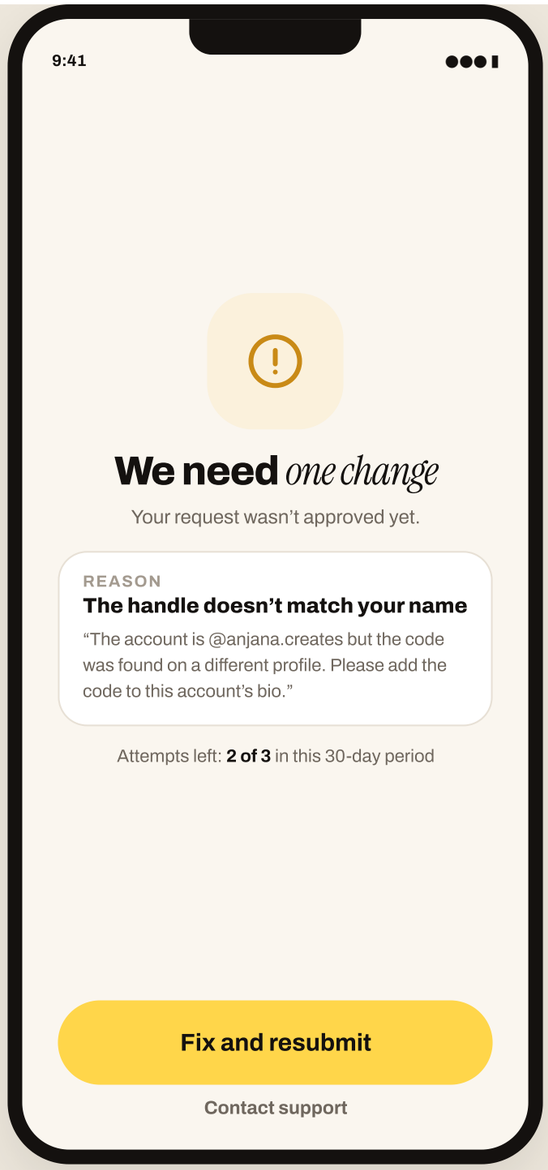

C13 **Verification request — Brand**

Business request. Documents are uploaded through the media pipeline (scan, then ready) and kept private. Submit stays on until required fields and at least one ready document exist.

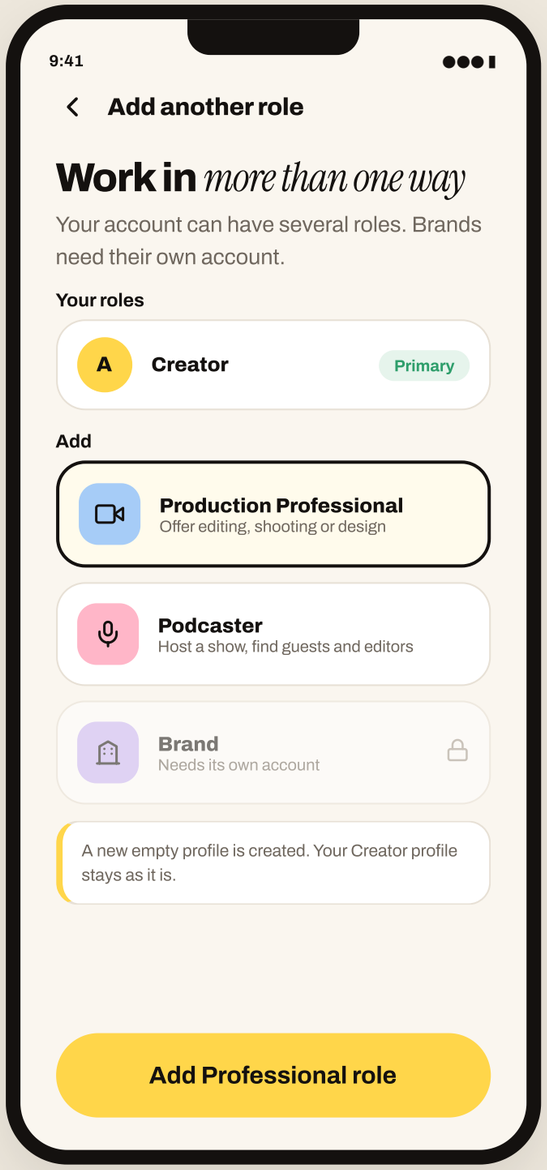

C14 **Verification result — Approved**

Result popup shown once when the admin approves. Lists exactly what changed (badge, ranking, limits). Reaching Level 2 is announced here and in a notification.

C14 **Verification result — Changes needed**

Shown for Rejected and Changes required. Always gives a reason from the fixed list and the admin's note, and the number of attempts left. Never shows internal notes.

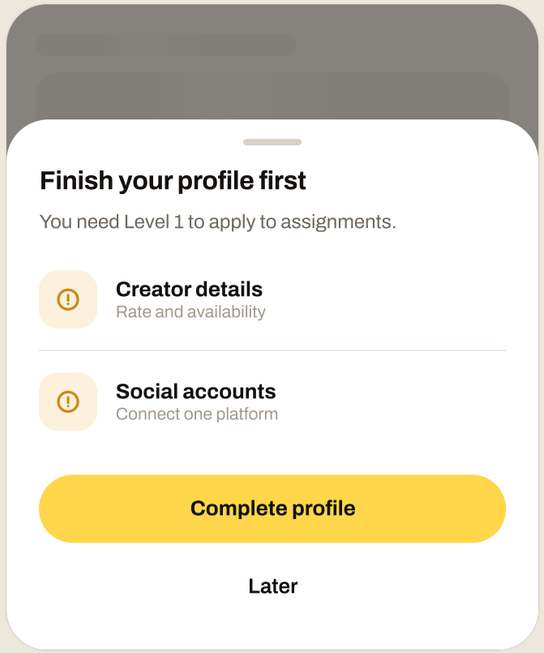

C15 **Add another role**

Adds a second role to the same account (Creator, Professional, Podcaster only). The first role stays primary and keeps driving Home. Removal is blocked while the role has active work.

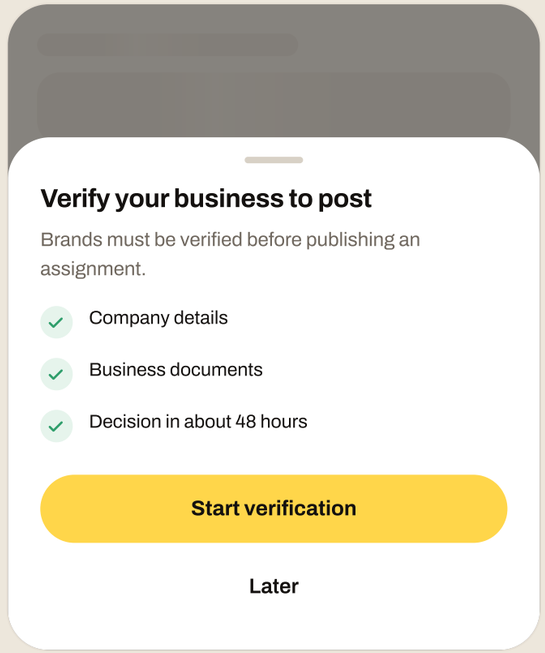

07 Dialogs and sheets used in this module

13 popups · wording is plain and kind

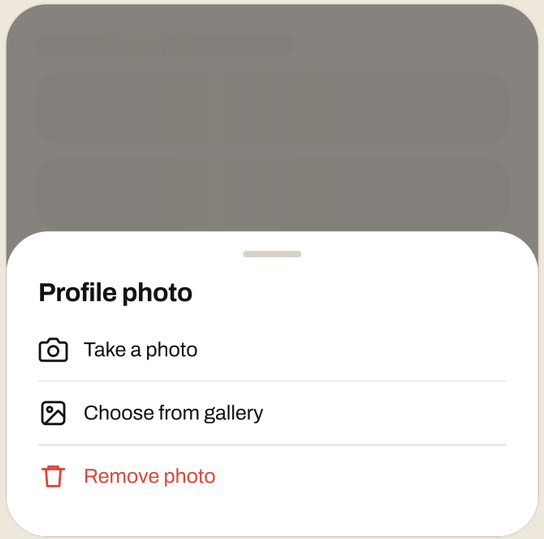

DLG-20 Complete your profile

Appears when an action needs Level 1 (apply, message). Lists only what is missing and goes straight to it.

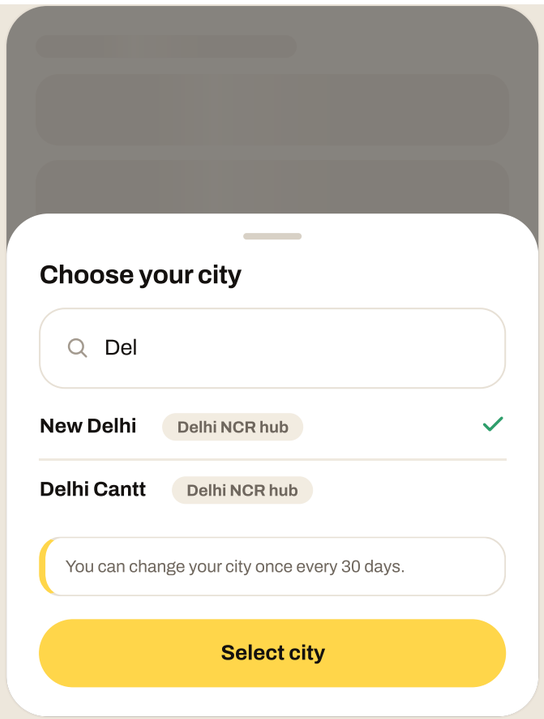

DLG-21 Verification required

Gate shown instead of a plain error when verification is the missing piece.

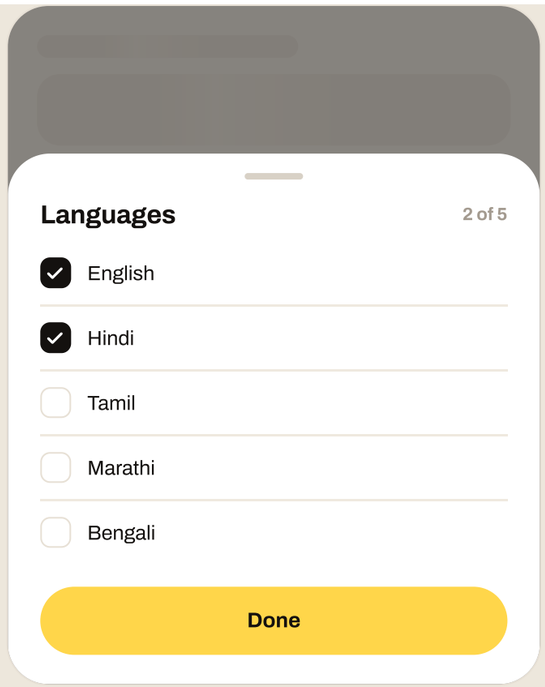

DLG-12 Photo source

Also used for the company logo. Remove shows only when a photo exists.

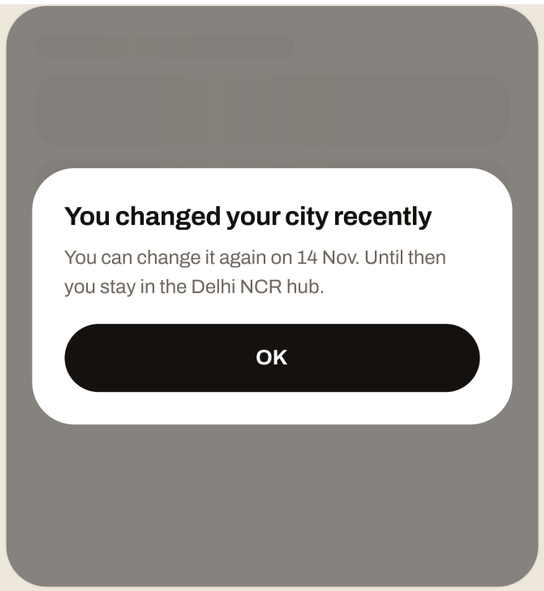

DLG-13 **City picker**

Cities come from the fixed list, grouped by hub. Typing is search only; free text is never accepted.

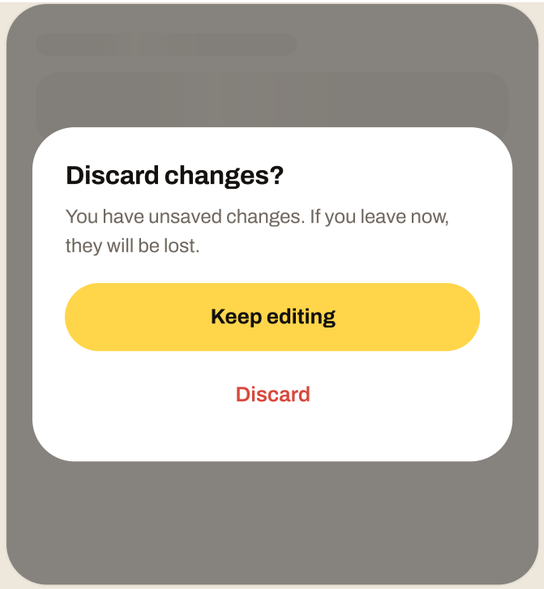

DLG-14 **Languages**

Multi-select with a counter. The same pattern is used for skills and tools.

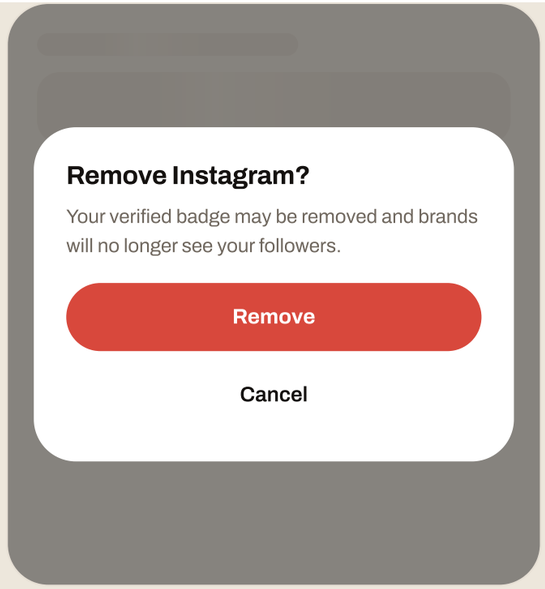

DLG-94 **City change limit**

Explains the 30-day rule with the exact next date instead of just saying no.

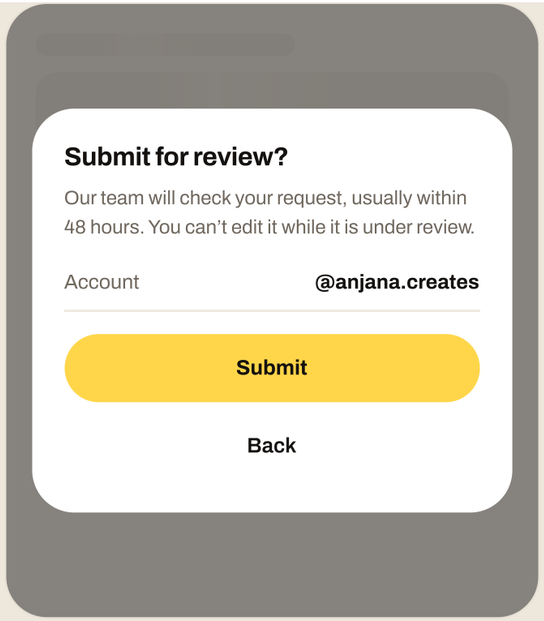

DLG-07 **Discard changes**

Shown when leaving any edit form with changes. The safe choice is the main button.

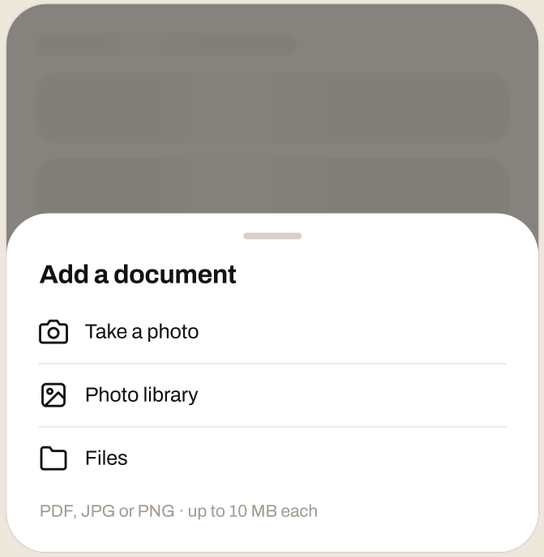

DLG-15 **Remove social account**

Destructive action uses the error colour. It says what is lost, not just “are you sure”.

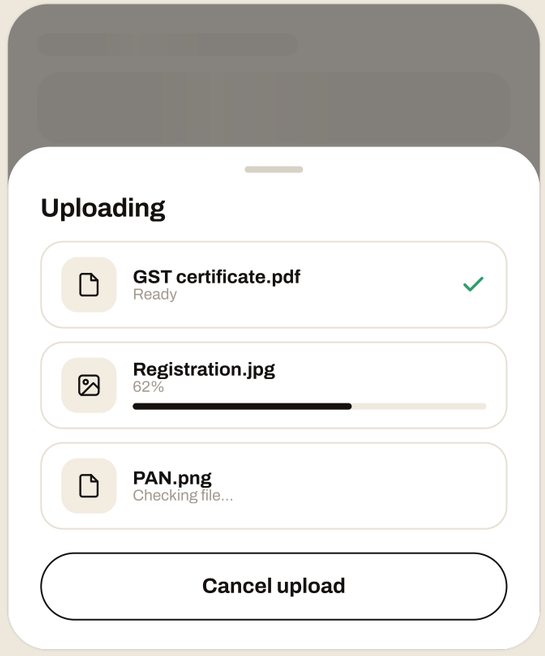

DLG-16 **Confirm verification request**

Last check before the request is sent. Shows exactly what is being submitted.

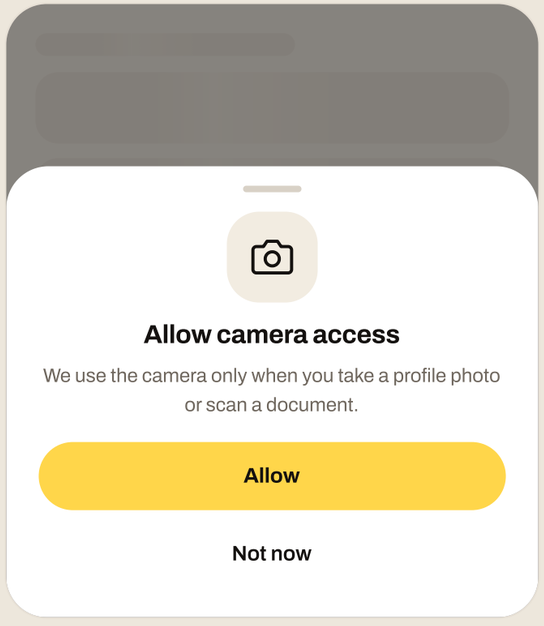

DLG-31 **File source**

States the allowed types and size before the user picks, so errors are rare.

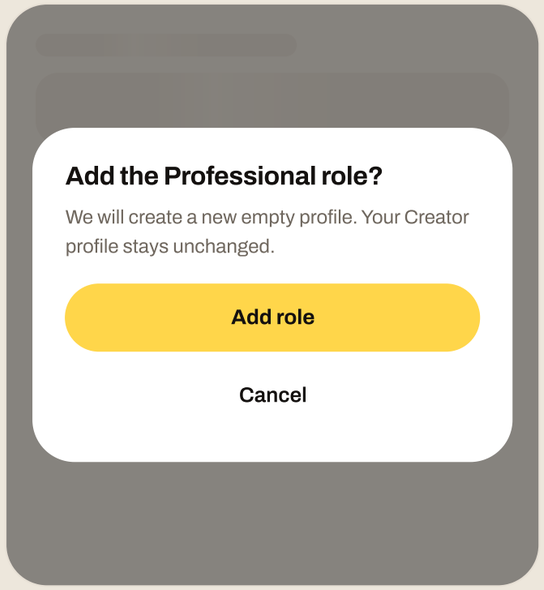

DLG-32 **Upload in progress**

Per-file progress and the scan step (uploading, checking, ready). A failed file shows Retry or Remove.

DLG-08 **Permission explainer**

Shown before the system permission prompt, so the user knows why. If denied, a second sheet points to system settings.

DLG-18 **Add a role**

Confirmation before a second profile is created.

08 Field rules and messages

Inline, beside the field, never a system alert

FIELD	RULE	MESSAGE SHOWN
Display name	2–50 characters, no web addresses	Enter your name (2–50 characters).
Bio	Up to 500 characters. No phone numbers, emails or links (R-PROF-04)	Please remove phone numbers, emails or links. You can share them in chat once someone accepts your request.
City	Required, chosen from the list. One change per 30 days (R-PROF-02)	Choose your city from the list. · You can change your city again on {date}.
Languages	1 to 5	Pick at least one language.
Skills	1 to 10, each with a level	You can add up to 10 skills.
Rate range	Whole rupees; minimum not above maximum; unit required when a rate is given	The minimum can’t be higher than the maximum.
Website	Valid https address	Enter a valid website, like https://yourbrand.com.
GST number	15 characters in the GST format; private	Check the GST number. It should have 15 characters.
Documents	PDF, JPG or PNG; up to 10 MB each; up to 5 files; must pass the scan	That file type isn’t supported. Use PDF, JPG or PNG up to 10 MB.
Social code	One-time code, valid for the request only	We couldn’t find the code in your bio. Check the account and try again.

09 Data per screen

Nothing here is verified against a live API

SCREEN	READS	WRITES	STATUS
C01	Section statuses, completion %, level	—	MISSING BACKEND: completion calculation
C02	Profile basics, cities list, languages	Name, bio, city, languages, photo (media id)	INFERRED: README profiles and media pipeline
C03	Category tree, skills list	Category, subcategory, skills with level	README: taxonomy and skills with proficiency
C04 to C07	Role profile fields	Role profile update	INFERRED: field names, “experience” not explicit in SOW
C08 to C11	Supported platforms, linked accounts	Connect, refresh, disconnect	MISSING BACKEND: connection method still open
C12 to C14	Verification status, attempts, history	Create request, upload documents, resubmit	SOW §8; new table
C15	Roles, active-work check	Add role, set primary	README roles; rule new

10 Open questions

1. **Instagram connection method.** C09 to C11 work for OAuth and for code-in-bio. Which one the backend uses changes only the text of C09 and C13.

2. **Followers and engagement.** C10 shows followers and posts only if the platform returns them. If it never does, those blocks are removed from the design.

3. **Completion percentage.** C01 needs the server to compute it and each section’s status. This is a real backend task.

4. **Rate units and availability values.** The three units and three availability options are placeholders until the backend enums are checked.

5. **Brand documents.** The list (GST certificate, registration, authorised person proof) needs agreement with the client’s compliance advisor.

6. **Podcaster categories.** C06 uses one category list; confirm whether podcasts need their own tree.
